

# Product Research

Product	From...	Made from...	The Price	Size	Power supply	Comment
	www.gadgetshop.com	Top: Thermosetting plastics Base: HIPS	£14.99	150mmx100mmx100mm	AAA Batteries	This product would be a suitable design because it fills the brief for my electronic product. I like this product because it is simple but still includes useful functions. In addition, the use of material works really well, however the design could have involved more colours to make it eye-catching.
 (Also available in Pink)	www.acegadgets.co.uk	Thermosetting plastic (using injection moulding)	£12.99	250mmx170mm x170mm	AA Batteries	This product includes many features such as: money (notes and coins) deposit, security card control, savings target setting, time and date display and sound alarm. The fact that this product has so many features makes it look too busy however the use of colour makes the appearance more attractive.
	www.electronicpetshop.com	Thermosetting plastic (using injection moulding)	£17.99	150mmx130mmx30mm	AAA batteries	This product is unique and draws in people's attention. It includes an interactive panda which gets happier as the money in the box increases. I don't particularly like this design as it quite childish and would therefore not be suitable for my target audience, young people.
	www.clickshop.com	Thermosetting Plastic (using injection moulding)	£10.95	100mmx100mmx150mm	AA batteries	This product is eye-catching as it has bright colours and an interesting shape. I like how the Jukebox plays a tune as money enters the box. It also has flashing lights which would make this design more interesting therefore appealing to the target audience.
	www.electronicpetshop.com	Thermosetting Plastic (using injection moulding)	£15.99	100mmx100mmx100mm	AAA batteries	This product has sensors in the eyes which detects when someone is going to put money in. You just need to wedge the money in the mouth and the face will chew and swallow it. I like the colour of this product and the use of the material works well however this design is quite childish.
