

Conclusions/Summary

From the analyses of the problem on this page, I now need to do research and carry out the following activities:

- 1) A product analyses of products, that are similar to my design idea.
- 2) Review existing products such as...
 - Small storage units.
 - Storage units that have been influenced by any design era in the last 100 years.
 - Storage units that are also toys.
- 3) Consult consumers to find out.....
 - What age group the storage unit should be aimed at.
 - What kind of design it could be.
 - What it should be made out of.
 - How it could be finished.
 - How it could be constructed.

Design Brief
 This year I am going to be making a small storage unit influenced by any design era of the last 100 years. It will be in the shape of some sort of transportation so it can move and be enjoyable for children aged 3-8 years old.
